

Domestic Airlines On-Time Performance Exercises:

Import the CSV data from the file **otp_time_series_web.csv** into Constellation using the delimited file importer. Set a default value for Source.Type, Destination.Type, and Transaction.Type.

1. What format could you use for the DateTime transaction attribute? Hint (A guide on Simple Date Formats can be found here: [SimpleDateFormat Java Docs](#))
2. What type of attribute should you use for the transaction statistics?

Find the capital cities in the graph. Add a comment labelling them as a capital city and display that as a label below the nodes.

3. Where in Constellation can you go to add Attributes?
4. Which Attribute controls what labels are displayed?

Study the graph and answer the following questions:

5. Which city do you think is better to transit through between Launceston and Townsville?
6. If you were flying into Australia, which city would you want to arrive in to connect to?

Next, open **eurovision.star** and answer the following questions:

7. Who has Australia not voted for?
8. In what year(s) did Serbia & Montenegro give or receive votes in?
9. How many times has the United Kingdom received 12 points (Including both Jury and Televoting)?
10. How many instances of voting occurred in 2007?
11. In what year(s) did Albania give 1 point to Sweden?
12. How many times have countries voted for Sweden?
13. Who has received the most 12-point votes, and how many times?
14. In 2018, which countries reciprocated 12 points?
15. Who has France given their 12 points to the most?
